

Series 65 LED Navigation light

The ultimate solution with de-icing system for arctic environments

GLOBAL MARINE & OFFSHORE
LIGHTING SOLUTIONS

NEW

The Series 65 LED Navigation light with its innovative LED technology is the right light solution for arctic environments. It withstands very low and high ambient temperatures. Compared with conventional navigation lights, it sets new standards in terms of efficiency, lifetime, cost effectiveness and maintenance.

LED OUTPERFORMS CONVENTIONAL SOLUTIONS

Depending on the ambient temperature, the LEDs offer a lifetime up to 110,000 hours. Cost-intensive maintenance is kept to a minimum. Series 65 consumes down to 2W. That represents a reduction of up to 95% in comparison with conventional incandescent light bulbs.

EXTREMELY SAFE

Due to the long lifetime of the LEDs there is no need to change the light source in rough environments.

SPECIAL DE-ICING FUNCTION

The de-icing function consists of a self-regulating processor controlled heating system and is more efficient than a standard 65 watt incandescent light bulb.

HIGH LEVEL OF RELIABILITY

The main and the back-up systems are compactly integrated into one housing and galvanically isolated.

OPTIMISED THERMAL MANAGEMENT

The special engineered heatsink in combination with the heating system minimise the effects of high/low ambient temperatures on the lifetime of the LED system.
