Welcome

Controls do not need to be complex to design, commission or operate. We take great pride in the simplicity of our solutions, the ease of managing them and the joy of using them.

This technical handbook aims to provide a complete 'how to' guide for all Glamox LMS solutions.

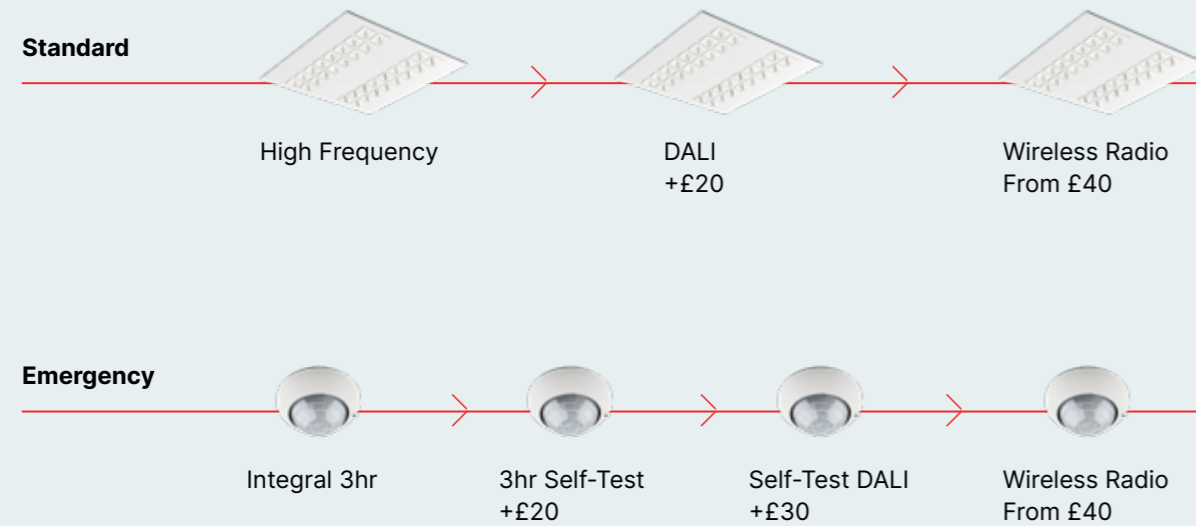

The right light, in the right place,
at the right time

More than lighting

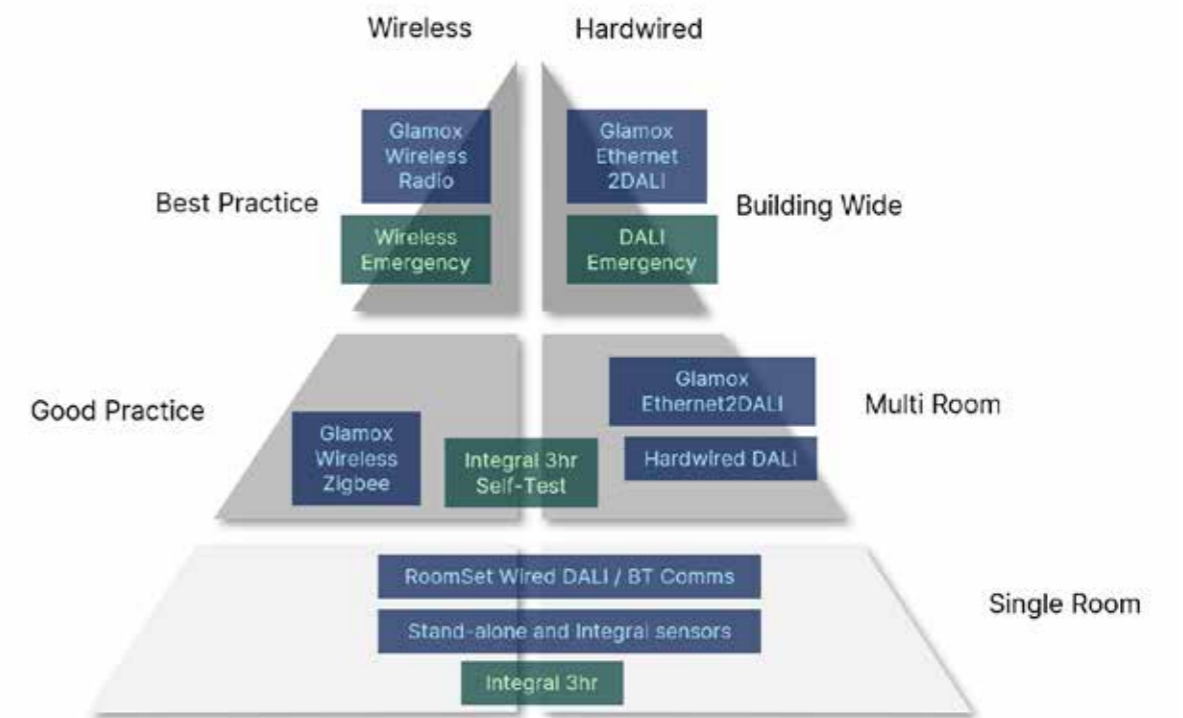

As a dedicated solutions provider, we prioritise more than just lighting solutions. Our focus is on delivering cutting-edge technology that integrates energy efficiency and human-centric control methods.

Price Structure

The table above serves as a basic price guide, providing a general reference for estimating costs. However, it's important to note that specific products may require extensive reworking of luminaire internals and/or externals, resulting in pricing that falls outside of the parameters outlined in this guide.

Product Hierarchy

Our feature rich solutions have been chosen to provide both high performance and peace of mind.

Both our Wireless and Hardwired systems are kept simple by their modular design – meaning that you can easily add, change, take away or expand the system as your requirements change.

The value of Wireless

Choosing between traditional DALI and a Wireless System is no longer a financial decision

High Frequency	DALI	CPW2-SEN
 £60	 £80 +(£40)	 £120
 HF	 DALI +£20	 D4i DALI +£25
	 From £40 p/l	 From £40 p/l
 £0.41 p/m	 £0.68 p/m	 £0.41 p/m

Industry leading solutions

- Wireless radio from £40 per luminaire
- DALI systems cost approx. £40 per luminaire
- DALI and Wireless are now cost neutral
- Less Wireless hardware to install over traditional DALI

CPW2 multi-sensor

What it means

- CPW2 benefits most commercial luminaires (normal mounting height)
- CPW2 is not always suitable for every luminaire type (e.g. High-bay, downlights)
- Integral daylight sensor
- Out-of-the-box readiness

New in 2024

- Wireless BT switch
- BT end-user scene control 'app'

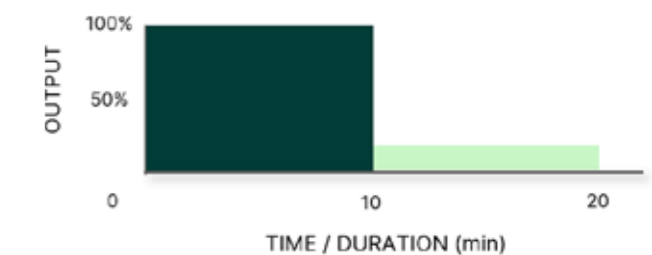

In 2020 Glamox decided to invest and reduce the cost of Wireless to match or better any comparable system. The results of this investment have now been launched in the UK as the new CPW2 sensor from Glamox. This device realises the ambition that we have held for many years, to be able to include wireless controls at the price-point previously offered for simple standalone luminaire sensors or a traditional DALI system.

Glamox Wireless Radio offers the functionality of a fully integrated connected lighting system and more. There are features over-and-above classic DALI systems such as dynamic grouping, independent daylight zones and scene control with built-in logic to prioritise and manage the interaction of these functions.

Our online Wireless Portal provides automated emergency testing and monitoring, heat mapping and the ability to monitor and enhance every aspect of wellbeing in the workplace such as circadian rhythms and checking Co₂, temperature, humidity and noise levels.

Out-of-the-box Readiness

Factory settings provide immediate functionality upon power up:

- Upon presence the PIR will activate to 100% for 10 minutes
- After 10 minutes of absence, the fitting dims to 10% for a further 10 minutes
- Start saving energy with immediate effect

Wireless Communication Types

Mesh

- Extensive coverage between multiple nodes
- Robust against failure with alternative data paths
- Scalability for easy expansion

Point 2 Point

- Immediate device-to-device communication
- Minimised data transmission via intermediaries
- Reduced latency for faster response times

P2P - Gravity Linking

- Gravity Linking connects out-of-range luminaires
- Extends network coverage
- Simplified network management

Wireless systems offer a diverse range of communication technologies. Typical Bluetooth systems rely on mesh networks to ensure strong signal coverage for all network devices.

However, mesh networks can suffer from data congestion and slower response times,

making certain features like corridor linking challenging.

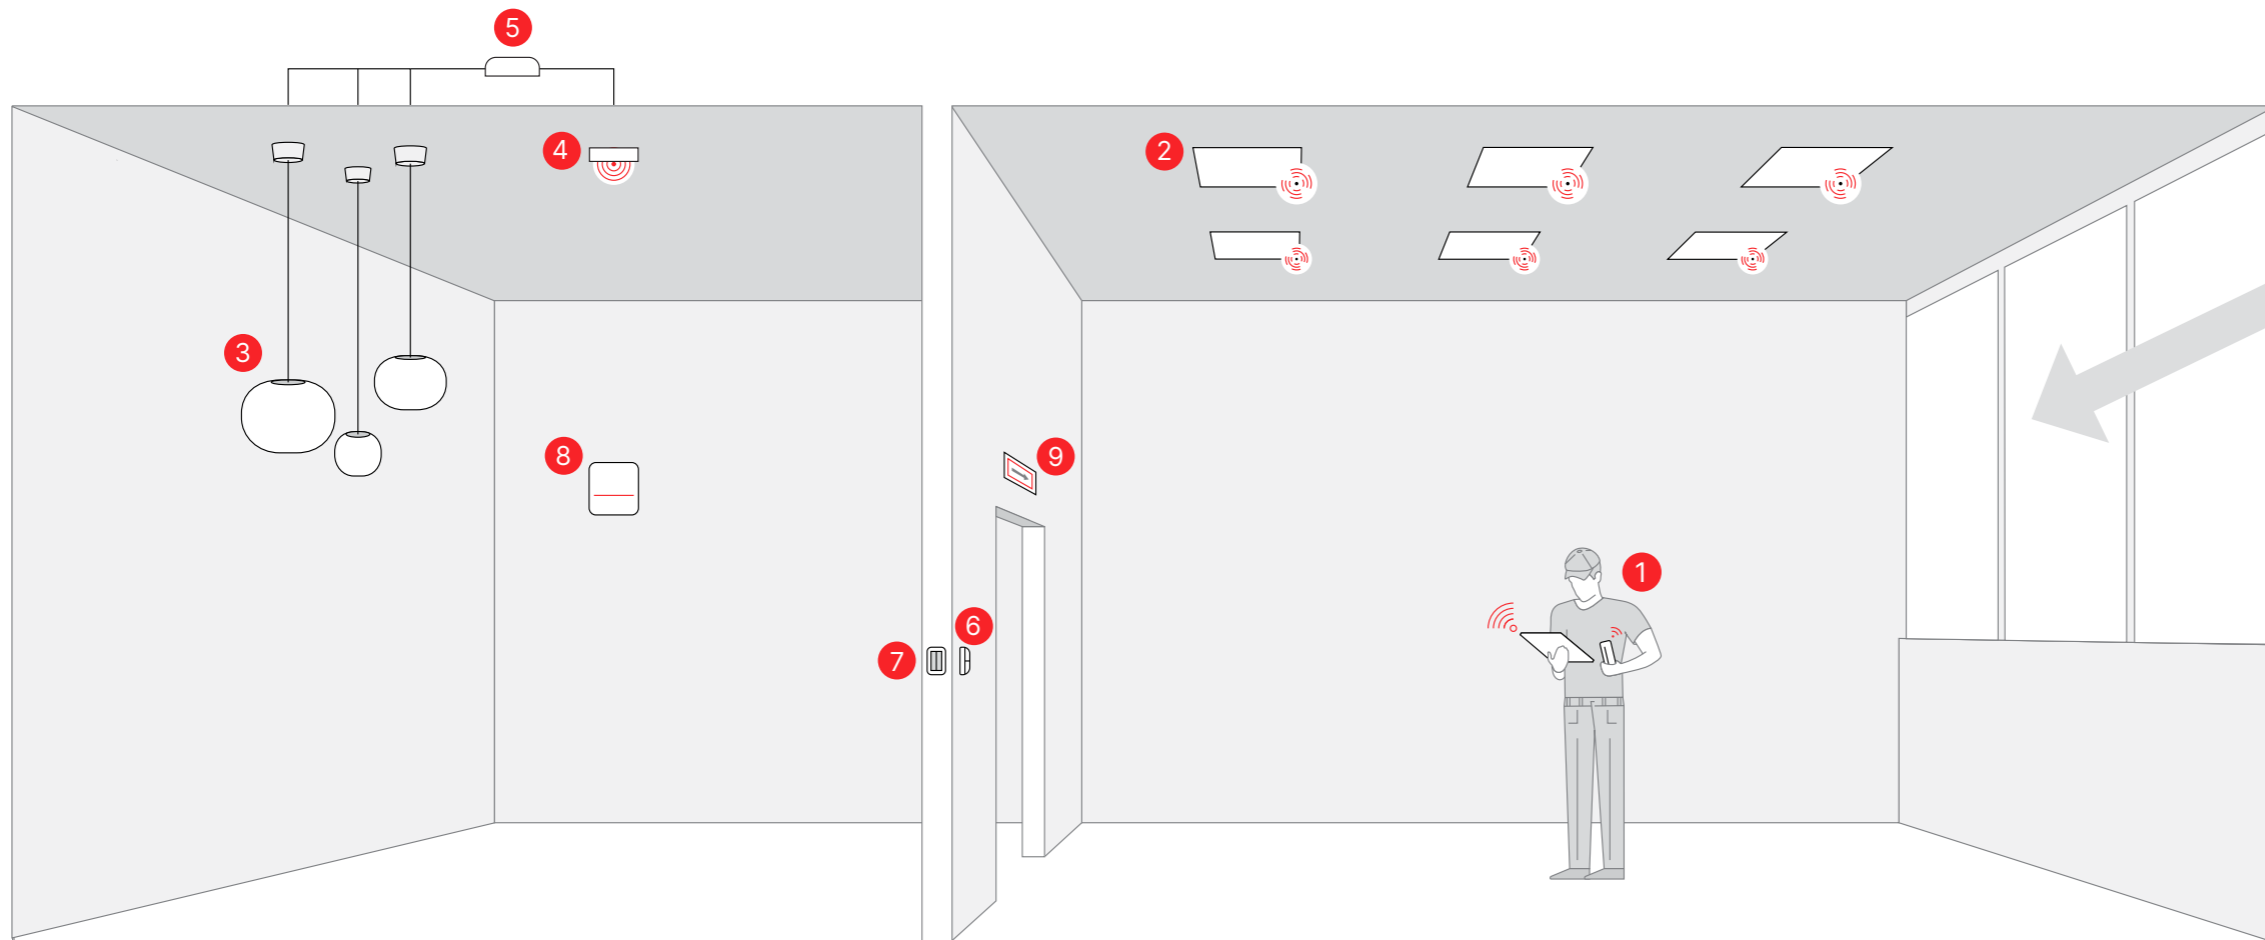

In contrast, Point-to-Point communication enables direct communication between individual devices, reducing data transmission and latency times significantly.

Glamox Wireless Radio utilises hybrid communication technology, enabling the system to adapt to the required function by utilising the appropriate communication type.

- Point to Point is used for direct commands, switching or dimming luminaires, recalling scene's etc
- Mesh is used for data reporting back to an access point – this type of data transmission isn't dependent on speed or immediate response.
- In instances where luminaires are out of range, they are simply linked to an in-range luminaire through Gravity Linking – to ensure comprehensive communication with every device within the network.

Glamox Wireless Radio – System Overview

Daylight Luminaires are linked by row inward of the window, and in accordance with natural light ingress

- 1** Commissioning tablet with pre-installed software and a dongle that communicates from Bluetooth to Wireless Radio
- 2** Smart Luminaire with a WR node, integrated PIR and light sensor
- 3** Standard DALI (non-WR) luminaires
- 4** External PIR or light sensor
- 5** Wireless Radio to DALI bridge with sensor input
- 6** Standard push buttons
- 7** Scene controller with transceiver. Scene controllers are available as mains voltage or as a battery powered wall box version
- 8** Access point to for cloud-based central monitoring
- 9** Emergency light with Wireless Radio transceiver

Wireless made easy

Typical floor plan

Wireless Technology

Design and installation of Wireless Radio couldn't be easier. There are no special zoning requirements and areas can be freely added or taken away without the need to add or alter any internal wiring.

- 3 Core wiring – L, N, E only
- Re-use existing cables / circuits
- 868 MHz frequency for 'Short Range Devices'
- Wireless nodes transmit up to 100m
- Significant benefits over Bluetooth networks
- Low latency means faster reaction times
- Granular control with Dynamic Grouping
- Building wide functionality (optional)

Centralised Functionality

Optional cloud-based web portal allows remote access to data rich reporting and building insights.

- Emergency testing – self-test emergency reports
- Energy monitoring – calculated energy reporting
- Heat mapping – space management

Dynamic Grouping

Dynamic grouping enhances energy efficiency by ensuring that only the necessary luminaires are lit at any given time. It can be applied in various scenarios:

- Open plan: Luminaires are organised into a movable grid of 9 fittings and follow the user
- Corridors: A group of 3 luminaires illuminates the corridor, effectively lighting the way ahead
- Stair cores: Landings are interlinked with both the landings above and below

Wireless Tool Kit

Wireless Tablet, Software & Dongle

Access Points

Access Points make the link between field level control and cloud-based diagnostics and reporting, elevating your setup from simple lighting control to comprehensive light management.

Design Notes:

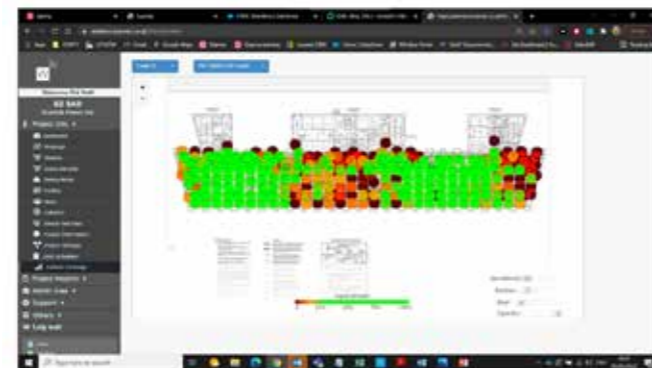

- Maximum 750 luminaires per access point (Regulation limit 1000 – allowing 25% overlap)
- Recommended minimum of 2 access points for system resilience
- Gravity linking removes the requirement for additional access points in stair cores or for external lighting

Access Points clearly indicate network coverage via the web portal. Luminaires that fall out of range are simply "Gravity Linked" with an in-range transceiver to ensure they remain within reach.

Signal Quality

Collators are sensitive to interference. Thick concrete, electrical cables and metal structures will reduce range. Please speak to the design team if you have any concerns or need any guidance with positioning.

Connectivity

Client LAN Connection (hardwired)

- Common practice to create a VLAN to maintain separation
- No annual fees for data
- Stable connection – no potential of signal loss

Access point provided with SIM DONGLE

- Dongle is pre-configured for the access point
- Customer supplies their own data SIM card

Access points provided with Data SIM

- We provide O2 SIM cards by default
- Client responsibility to ensure network coverage
- Tri-band cards available upon request

Wireless Portal

Identify your site by postcode

Review occupancy data with automated heat mapping

Schedule automated reports for occupancy, energy and emergency lighting

View your emergency lighting test results Immediately diagnose and locate any failures

Emergency Reporting

Wireless Controls for Emergency Only

- Emergency lights and exit signs use a dedicated emergency node
- Some Installations do not have a control requirement but need emergency monitoring
- Installations with existing systems, can use Wireless for emergency monitoring only
- Extensive range of Wireless Emergency Luminaires (standalone examples below)

SINZ E-S
SNZ360740

LED-EM T-R70
LDE360336

LUMI-S E3/WR CR
LUM144736

E3M Wireless Node
Reduced size for
emergency luminaires

Special Considerations

- Identification - Luminaires are positively identified by switching them on and off
- RF Range - Spacing between Emergency Lights is often much further than between the standard luminaires – which makes Bluetooth mesh unsuitable
- Centrally fed – wireless monitoring can extend to central battery and further integrate with BMS systems

Self-Test Emergencies

- Emergency luminaires perform both function and duration testing throughout the year
- If a test fails it is indicated by a flashing red LED
- A green LED is therefore proof that (a) a test has run and passed in the last 28 days and (b) a Duration test has run and passed in the last 12 months
- This is in accordance with the Emergency Lighting Standard BS/EN 5266 and the Emergency Lighting Automated Testing Standard BS/EN 62034

Emergency Test Reports

Emergency reports are automatically emailed to you every month and stored in the cloud (off site) for you to review or reprint for auditable purposes.

Alternatively, you can visit www.wireless.luxonic.co.uk to view the Emergency report which will identify any failures and show the type of fault (Charge, Battery or LED)

Once on the portal, enter the Post Code for the site > click Project Reports > Click Emergency Lighting Report

Wireless to Hardwired

All under control

Occasionally, creating a wireless variant of a product is impracticable. In such circumstances, wireless control boxes are utilised to facilitate the management of both DALI dimmable and high-frequency (HF) switched drivers.

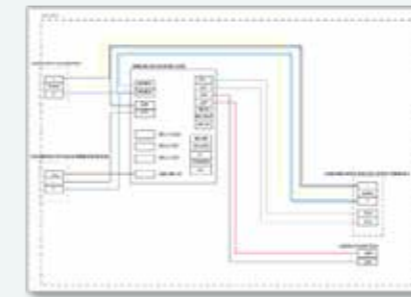

- Wireless relay (HER) for HF luminaires provides a 5A switched load
- DBNI box provides DALI Broadcast for a maximum of 64 luminaires
- DDI box for DALI Broadcast control of up to 4 luminaires
- DDI box provides option for pluggable PIR with 7m detection area
- DBNI and HER boxes should be grouped with remote fittings or sensors where possible
- Emergency monitoring is not possible via wireless control boxes – use stand-alone EM

Wireless to Hardwired

Scene Plate with optional powder coating and bespoke labelling

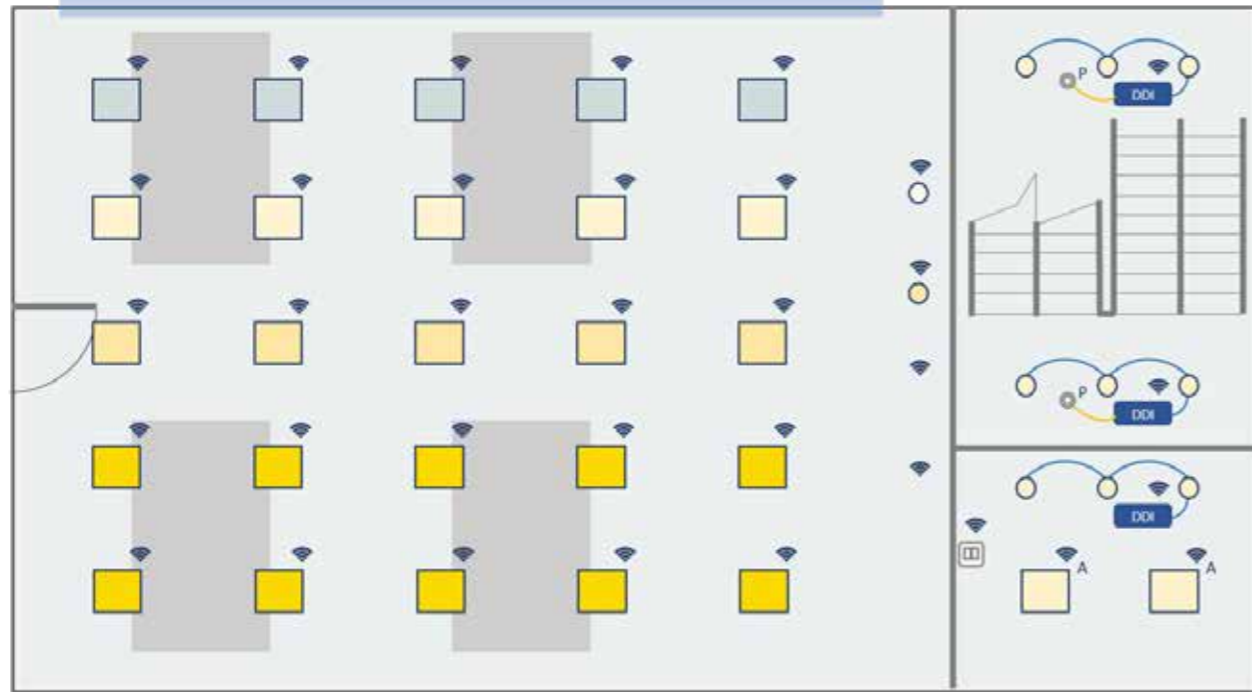

Scene plates and switches

- Both variants of the scene collector can connect to a scene plate or momentary action switch
- Scene plates fit standard UK back box
- Standard finish for scene plate is stainless steel
- Choice of mains powered or battery scene collectors
- 45mm (min) back box required when using battery pack
- AAA batteries are not included with Battery Scene Collector
- 10-year battery life
- Face plate can be powder coated and labelled if required (additional charges apply)

Daylight Linking

Typical floor plan

Daylight Linking

- ✓ All Glamox LMS solutions offer daylight linking
- ✓ Maximise your energy savings
- ✓ Dim internal lighting in accordance with daylight levels
- ✓ Reduce energy by as much as 80%
- ✓ Best practice – daylight link +2 rows
- ✓ Good practice – daylight link window row
- ✓ Recommended 1x daylight sensor per façade/per floor
- ✓ Sensor options for both Hardwired and Wireless Radio

Easy Installation

- ✓ DALI sensors provide PIR and daylight sensors
- ✓ Wireless daylight sensors can be built in or stand-alone
- ✓ Can also be used to trigger dusk-down lighting

Daylight linking – Bright Day

Daylight linking – Dull Day

Human Centric Lighting

Human-centric and Tunable White lighting

The increasing tendency for individuals to remain indoors for a large part of the waking day, has unintended consequences for our natural circadian rhythms, primarily due the exposure of artificial lighting that is not aligned with our biological needs. Facilities like offices, schools, and healthcare centers often use bright, daylight enhanced lighting to maintain alertness and productivity.

However, blue-enriched light, which is beneficial during daylight hours for maintaining wakefulness and focus, can become harmful when exposure extends into the evening. Many people who work or study late are especially vulnerable to disruptions in their circadian rhythms. This is because exposure to blue light at night can severely suppress the secretion of melatonin, the hormone that helps regulate sleep, effectively reprogramming our body clock and potentially leading to a range of health issues.

Natural light constantly changes both its colour temperature and intensity throughout the day. HCL lighting provides biologically optimized compositions of light to enhance concentration and productivity in the daytime working and learning environments while encouraging relaxation and regeneration during the night

Lighting control systems provide the platform and means to optimize colour tunable, HCL lighting. A Pre-set profile is provided detailed below) or this can be modified to suit the end user / client specification

Automated HCL control profile

Using global positioning and an astronomical time clock, the system automatically adjusts the HCL timeline and associated temperatures based on time of year/daylight hours.

- The DALI control system starts the HCL time profile at dawn with lighting at its warmest colour temperature, at around 60% output
- This fades to the coolest colour temperature by 12pm and will hold both colour temperature and highest (100%) output until 2pm
- From 2pm lighting fades from the coolest colour temperature back to the warmest
- The warmest colour temperature is reached at dusk, at 60% output.

Glamox Ethernet2DALI

Dynamic solutions

DALI2

- D2 ECM provides 4no DALI 2 lines
- DALI 2 ensures seamless integration with other D2 devices
- Future-proof - ready for advancements in lighting technology
- System limit - 20 routers max.
- Can co-exist with D1 ECMs
- Input devices do not use a luminaire address

Plug and Play

- Each CC10 box provides 9 power/DALI outputs
- Luminaires supplied with 3m / 5 core cable
- DALI PIRs supplied with 3m / 2 core cable
- Each CC10 allows through wiring for power and DALI feed from ECM

Hardwired

- Permanent 230v supply to all luminaires
- ECM provides 2no DALI lines
- 64 address / 250mA per DALI line
- Luminaires and DALI input modules connect to the DALI bus
- DALI cable = 2x 1.5mm / 300m max run

Ethernet2DALI planning guide

- ✓ Smart building / IoT ready
- ✓ Simple modular design options
- ✓ Central control and visualisation
- ✓ Energy monitoring
- ✓ Emergency monitoring (automated)
- ✓ BMS integration
- ✓ TCP/IP Cat 5/6e network structure
- ✓ Blind automation
- ✓ Expandable solution
- ✓ Time saving installation options

Commissioning and Maintenance Services

From commissioning, to end user and installer training, our services encompass every stage of the project. We ensure seamless integration of technology, optimal system performance, and ongoing maintenance support.

Our expertise enables us to deliver reliable solutions that maximise the efficiency and functionality of your system.

Commissioning

Our bespoke commissioning service is the cornerstone of ensuring your lighting control systems are perfectly tailored to your space. Leveraging over 50 years of combined in-house engineering expertise, we guarantee a seamless integration of our advanced lighting solutions into your environment, ensuring optimal performance and satisfaction from day one.

- High efficiency - 200 devices per day
- Can be completed as phased works
- Our in-house engineers will deal with and fix issues along the way
- System demonstration and client training included at handover

Wireless Commissioning Process

Off-site

On-site

Training

Empowerment through education stands at the heart of our training service. We offer comprehensive, hands-on sessions designed to equip your team with the knowledge and skills to master our lighting control systems. Our experienced engineers lead these sessions, sharing insights and techniques honed over decades to ensure you can maximise the potential of your lighting solutions.

- Hands on training for both hardwired and wireless systems
- From simple set up to advanced diagnostics
- Field or classroom based depending on requirements and availability
- Training material provided where applicable

Maintenance

The longevity and reliability of your lighting control systems are our top priorities. Our maintenance service is meticulously crafted to keep your systems running at peak efficiency. With preventive care, expert troubleshooting, and ongoing support from our seasoned engineering team, we ensure your investment continues to perform flawlessly for years to come.

- Enhanced system reliability
- Longer lifespan of equipment
- Improved energy efficiency
- Safety and compliance assurance
- Performance optimisation
- Access to technical support

Glamox

Glamox is a company that develops, manufactures and distributes professional lighting solutions for the UK market. Our mission is to provide sustainable lighting solutions that improve the performance and wellbeing of people. Our local knowledge and capabilities are further enhanced by the support of the Glamox Group, which trades in more than 60 countries, operates 11 factories, and employs over 2,200 people.

High performance and ease of use

Our solutions are designed to combine high performance and sustainability with simplicity and ease of use, offering a superior customer experience. We make smart use of the latest technology and supply it with generations of experience and true care for our customers and their people.

Quality brands and dedicated support

We offer our solutions through a range of quality lighting brands. Regardless of brand, the close follow-up of each customer is at the heart of our offering. Whether in a production facility or an office building, our ambition is to provide lighting that contributes to a better life for the businesses we serve and those who work there.
