

Time-saving lighting design

Glamox Plug-in PRO for AVEVA PDMS™

New plug-in saves time and money!

Lighting calculations and recalculations are time-consuming operations. Glamox Plug-in PRO for AVEVA PDMS™ utilizes available 3D models and makes lighting design much quicker – and more accurate.

Once the Glamox plug-in is installed, users can carry out complete lighting calculations in the PDMS user interface. The actual calculations are made by a database which is included with the plug-in.

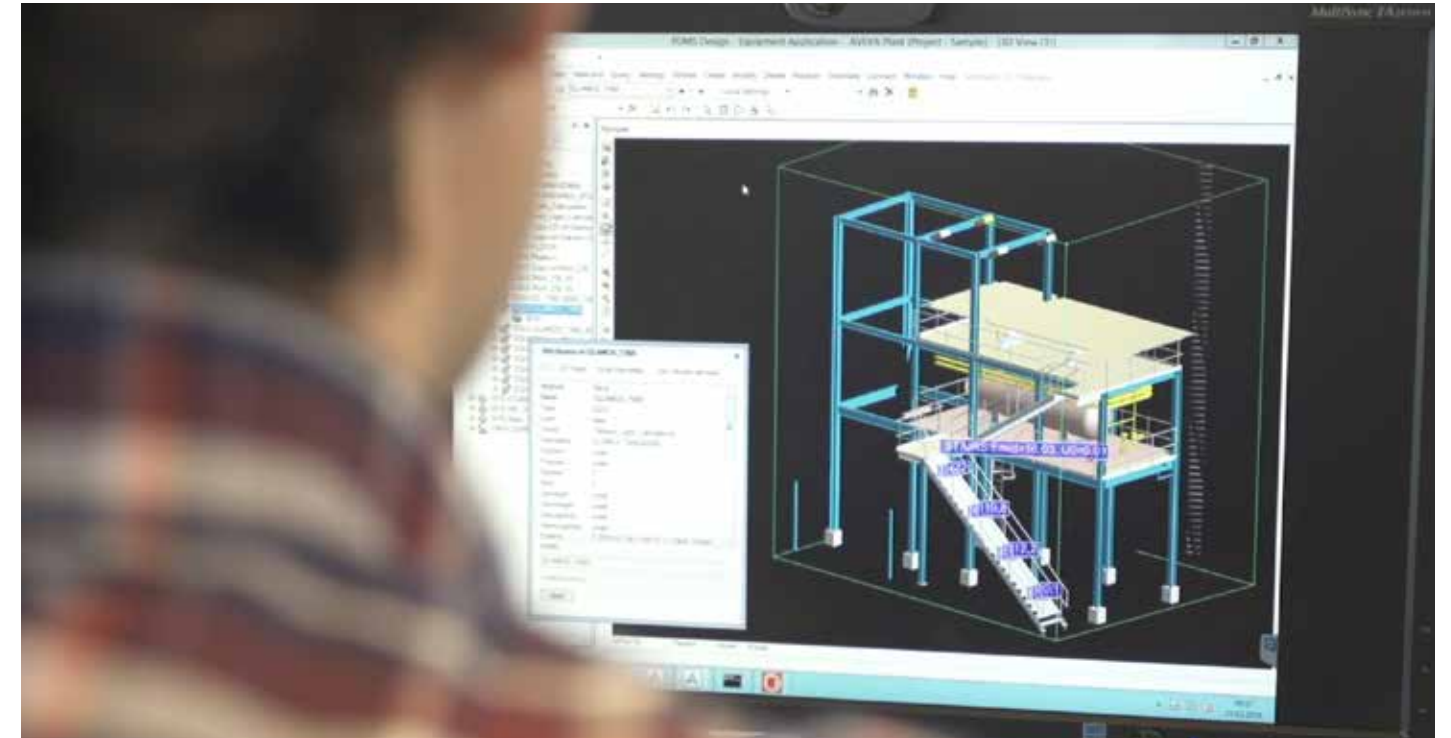

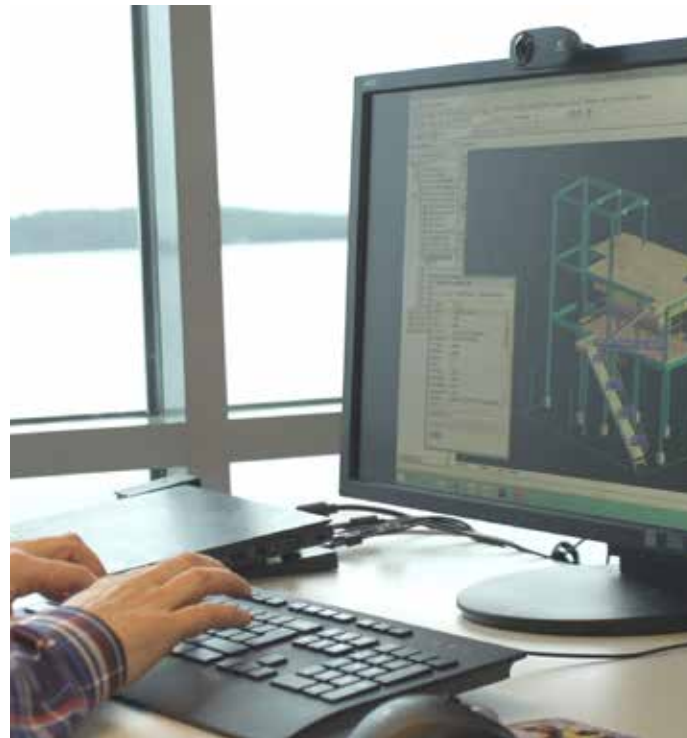

Speed and accuracy

The speed and accuracy of the calculation program is impressive. Once the calculations have been made, PDMS can visualize the lighting design, showing average lux levels and uniformity.

This is a significant time- and cost saving tool for lighting design, reducing the need for corrective work during the construction phase. It also generates valuable "as built" documentation.

LITE version also available

Glamox Plug-in LITE for PDMS generates 3D files for lighting calculation programs. More information about the LITE version is available from our web site.

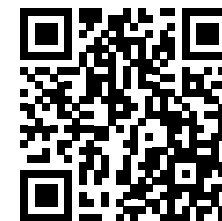

Major benefits:

- Cost and schedule saving calculations
- Higher design efficiency and accurate results
- Increased accuracy means lower installation costs
- Reduced rework and delays
- Improved quality/3D
- Better communication with customers
- High quality "as built" documentation
- It's free!
